

The Future, Now!

Long dreamt of by mothers and calculus teachers everywhere; finally, guff need not be taken.

**Imagine this
situation.**

You: Wow!

**You've been a big help!
Thanks for nothing.**

ChatBot:

"You're welcome!"

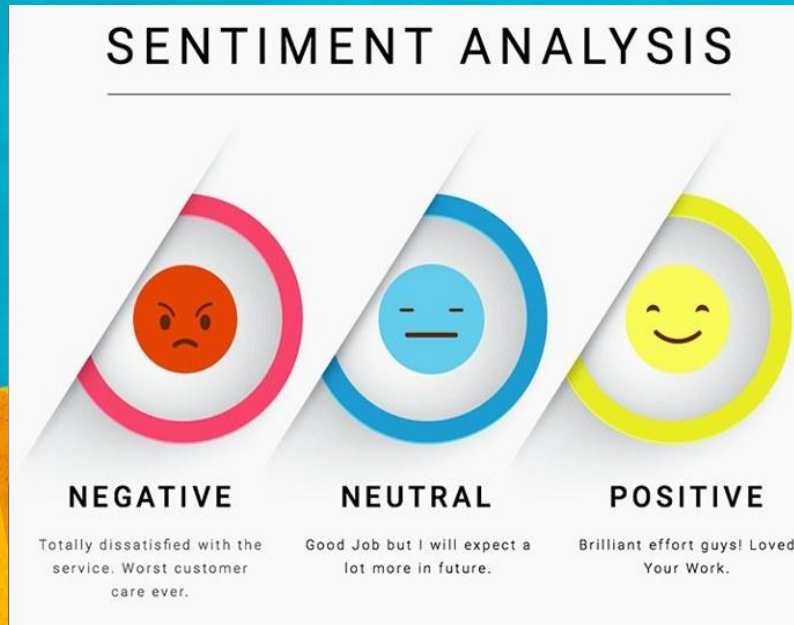

Or this Review.

A Night at Bulls (sports bar?)

‘Ah, Bulls, What fond, fond memories I have of my one and only visit to your “establishment”’.

How's the water?

Combined Headlines

So how did we do it?

87%

Whoa! I can do better than that? you say.
I know, but our model is still a baby.

Future Work

More Data!

Like us Humans, the more exposure to sarcasm the model gets, the better it will be at picking up in it.

More Diverse Data!

The data we used was pretty controlled. That's why we used headlines. The next steps would be forums like Reddit and Twitter.

More Power!

Due to computing restraints we couldn't do as much hyperparameter tweaking as we would have liked.

With more computing power might have been able to improve our models performance.

Thanks!
